

## Are You an Unrecognized Gifted Adult?

Why is it important to know?

- You will gain greater self-awareness.
- You will be able to develop your gifts for the good of all instead of hiding them to fit in better.
- You will find peers who truly understand you.
- You will discover literature that resonates with your feelings.
- You will see how giftedness affects your identity, as well as your life experiences.
- You will become a good role model for your family.
- You will help giftedness come out of the closet.
- You will learn about opportunities to connect with other gifted adults.

We invite you to complete the attached *Giftedness in Adults Rating Scale* as part of your own journey of self-awareness. Do not expect to fit all characteristics. If you rate yourself 4 or 5 on 25 of these traits, there is a strong likelihood that you are a gifted adult. You will find loads of information in our journal. <http://www.gifteddevelopment.com/products/adj>

If you are a woman who resonates with these traits, please join us at our Gifted Women Symposium on June 2<sup>nd</sup>. A few seats are still available.

## **Background of the *Giftedness in Adults Rating Scale***

Our research on giftedness in adults began at the University of Denver in 1980, where we initiated the Dabrowski Study Group. This led to the formation of our nonprofit, Institute for the Study of Advanced Development (ISAD) in 1985. Since 1989, ISAD has published the only journal on adult giftedness: *Advanced Development*. The journal showcases Dabrowski's theory of positive disintegration and promotes gifted women. In 2011, we organized the first symposium on gifted adults. In 2012, we organized an International Congress on Dabrowski's theory. And, on June 2<sup>nd</sup>, 2018, we are hosting the first symposium on Gifted Women.

Our *Giftedness in Adults Rating Scale* (Silverman, 2005) was posted on Gifted Development Center's website in 2005. It is a self-rating instrument composed of 38 items on a Likert scale from 1 (not at all) to 5 (very true). The reliability and predictive validity of the scale have been demonstrated in two independent published studies. Perrone, Perrone, Ksiazak, Wright, & Jackson (2007) found high internal validity (Cronbach's alpha .88). Law & Haron (2016) studied 263 Malaysian adults, all of whom had attained bachelor's degrees. They found that scores on the *Giftedness in Adults Rating Scale* predicted creativity on the *Creative Personality Scale* and postformal thinking (higher ethical judgment) on the *Postformal Thought Scale*. (See Volume 15 of *Advanced Development* to learn more about this study.)
